Our Services

St. Michael's Mobile X-Ray is a travelling radiological service offering diagnostic services to clients in Edmonton and surrounding area.

We provide services to:

- Long-term care centres
- Healthcare facilities
- Supportive living communities
- Homecare and hospice agencies
- Other clients as needed

We are dedicated to providing the best service to our clients.

Designed for use in almost any setting, our portable x-ray machines are dispatched along with a certified technologist, directly to the patient, and are capable of almost every routine radiographic view.

Detailed images are easily obtained (with short exposure times) on ambulatory and non-ambulatory patients.

Technology

We use advanced digital radiography (DR) equipment.

The exposure is less than used previously and the image resolution is superior.

Our vehicles are equipped with sophisticated digital equipment designed to improve dispatching and turnaround time.

We use radiological software that is state of the art, utilizing Picture Archiving Communications System (PACS) that offers web access for x-ray images.

Reports

Diagnostic reports are uploaded to Netcare after interpretation by a radiologist.

These reports are also faxed to clients immediately following being read.

Customization of reports can be done, allowing for management of clinical outcomes.
